Investing in development

Permedia has been implementing a major investment valued at EUR 5 million since 2013. Transformations commenced in 2012 when the majority stake in the Company's initial capital was acquired by MW Chemie, s.r.o. represented by President Michal Wygrys.

The investment project covered procurement of new production lines, setup and equipment for a modern laboratory and taking onboard over 20 experienced new staff members. Having launched one of the largest masterbatch lines in Europe, Permedia made inroads into the white concentrate market. Initiated investments foreshadow subsequent changes and growth to be driven by the premium quality of products, flexible deliveries and low prices.

« The plastics industry has 1 % share in the combined GDP in the EU. It also forms one of the top five most innovative sectors of the EU economy whose achievements may translate into the enhanced quality of life for humans and the environment. This is why Permedia is placing such a strong emphasis on the strategic development and investments. We are an organisation that is witnessing dynamic growth. Changes are implemented at Permedia by a competent and experienced team. We are working together to assure high standards of production and deliveries to our customers. »

Michal Wygrys, President of Permedia SA

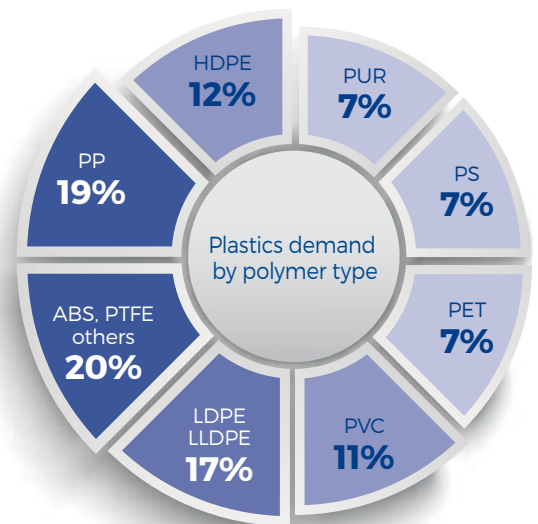

A new quality of production

Our concentrate production is driven by the latest German technology supplied by Leistritz. With large-scale production lines, we are able to manufacture production batches of various sizes, demonstrating repeatable quality parameters. The sophisticated granulation system delivers masterbatches as micro granules. This solution is addressed to clients who deploy colorants in such form in their manufacturing process.

We are creating colors for your plastics

Products from Permedia's range may be used to color: plastics, resins, paints, varnishes, enamels, ceramics and construction mixes. Their advantages include:

- Superior dyeing strength and color efficiency
- Maximum resistance to light and atmospheric conditions
- High dyeing effectiveness for excellent dispersion of the pigment

Plastics -Facts 2013.
Analysis of production, demand and recovery of plastics in Europe.

Permedia's range features:

- Masterbatches - pigment concentrates and additives (Plastoperm, Addperm)
- Powder pigments (Oxyperm, Multiperm, Cadmoperm, Ferroperm, Ferromix)
- Liquid pigment paste (Disolperm)

Certified quality

The high quality of our management system and products has been confirmed in 2014 by the EN ISO 9001:2008 certificate. Operations of Permedia's system are audited every three years by experts who confirm its compliance by extending the certificate for a consecutive period of time.

A package of benefits for our clients:

- Low price
- Guaranteed premium quality and reproducibility of delivered products
- Flexible approach to customer requirements, on-time delivery
- Vast experience in product design to develop and manufacture colors aligned to client's specification and requirements
- Knowledge of various technologies and support of seasoned technicians
- A laboratory fitted with state-of-the-art equipment to implement innovative projects
